

Fuel Scout

Fuel Control & Management System

Ground Breaking Technology and Facilities

- Designed from the outset using leading edge technology and the latest innovations in software design to give extensive facilities without high costs.
- By using advanced 'Crystal' memory techniques it is not necessary to rely upon battery backup or magnetic storage methods for retention of data and critical system information
- Ease of operation is a high priority, and through the use of a large backlit graphics display, information can easily be viewed and changed.
